SUMMARY

Aspiring Gen AI Engineer with a B.Tech in Artificial Intelligence and Data Science, passionate about building LLM-powered applications from RAG pipelines and vector-based semantic retrieval to prompt-engineered agents and embedding-driven search. Eager to grow across the full Gen AI stack: data ingestion, embeddings, vector databases, LLM orchestration, and API integration, with hands-on experience turning unstructured documents and data into intelligent, working systems.

SKILLS

- **Generative AI & LLMs:** LLMs, RAG, Prompt Engineering, MCP, Lang Flow, Lang Chain, Deep Eval, GitHub Copilot
- **Programming & Databases:** Python, SQL, MongoDB
- **APIs & Tools:** REST APIs, Postman, Git, GitHub, VS Code

INTERNSHIP

ML Intern — Lennox India Technology Centre Pvt Ltd, Chennai (Jun 2025 – Jul 2025)

- Engineered an LLM-based summarization pipeline for FEA simulation reports, using prompt engineering to convert dense technical documents into structured, retrievable summaries.
- Partnered with the engineering team to design and validate AI-driven workflows, translating ambiguous requirements into structured, testable solutions.

Gen AI Intern — TestLeaf (May 2026 – Aug 2026)

- Building LLM-powered applications as part of a Generative AI Engineering program, working hands-on with prompt engineering, RAG pipelines, and Gen AI workflow design.

PROJECTS

AI Resume Screening Assistant (TypeScript, Node.js)

- Designed an AI-powered recruitment solution that combines Retrieval-Augmented Generation (RAG), embedding models, and a Vector Database to retrieve and analyse relevant resume content.
- The assistant performs semantic similarity matching, generates concise candidate summaries, identifies missing skills, and recommends the most suitable candidates based on job requirements.

QA Bot (Node.js)

- Built an intelligent document-based QA system that allows users to upload PDF, DOCX, or TXT files and retrieve precise answers from their content.
- The application converts documents into embeddings, stores them in a Vector Database, retrieves relevant context using semantic search, and generates AI-powered responses with an LLM.

COPS in Cars (YOLOv5, Raspberry Pi, Arduino IDE)

- Built an AI-based vehicle safety system for accident detection, health monitoring, and emergency alerts with two-way communication and real-time response.

EDUCATION

Velalar College of Engineering and Technology, Erode

B.Tech in Artificial Intelligence and Data Science | CGPA: 8.01 | 2022 – 2026

COURSES & CERTIFICATIONS

- Generative AI Engineering — TestLeaf
- Privacy and Security in Online Social Media — NPTEL (Jan–Apr 2024)
- Introduction to Industry 4.0 — NPTEL (Jul–Oct 2024)

LANGUAGES

English, Tamil
